

Fleetintelligence

Easy and efficient fleet management

Fleetintelligence - a dynamic platform for fleet managers to view information and oversee and control all assets via a user-friendly web portal.

sgfleet understands that access to information is critical to you. Fleetintelligence is a strategic fleet management tool with a variety of reporting and transacting functions that allow you to control business expenditure and minimise risk.

Benefits

The Fleetintelligence dashboard is customisable, presents information in an intuitive graphical format and allows you to:

- See your fleet at a glance on a customisable home page and quickly drill down to the key statistics that are important to you
- Easily drill down to see your fleet and specific reports by cost centre
- Quickly search for a vehicle by registration or driver name
- Conveniently generate and schedule automatic reports on fuel usage, infringements, vehicles on order, maintenance history and invoices
- Review key documentation relating to your fleet policy, which can be stored directly in Fleetintelligence using the 'Documentation' module
- View external data feeds to show vehicles that have been recalled and current ANCAP safety ratings
- Manage your own key fleet data via the optional 'Fleet Data Management' module, without the need to contact **sgfleet**.

As detailed below, recent upgrades also include a Trips widget to monitor carsharing and functionality for the management of electric vehicles if this is relevant to your fleet.
